

# CDOT I-70 Glenwood Canyon Update

## Transportation Legislation Review Committee

August 4, 2021

# Damage to the Viaduct

Portions of the viaduct that the westbound lanes travel upon have sustained serious infrastructure damage from the debris flows and boulders. The debris has also flooded the lower eastbound lanes.

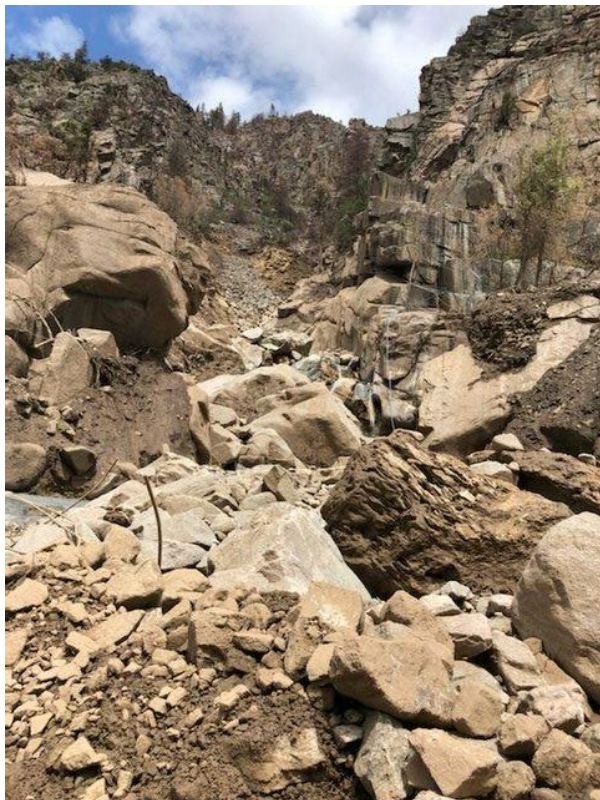

# Debris Removal Efforts

On this Monday alone, CDOT crews removed over 500 truckloads of debris from the canyon. CDOT has deployed maintenance and technical staff from the entire state to support this effort.

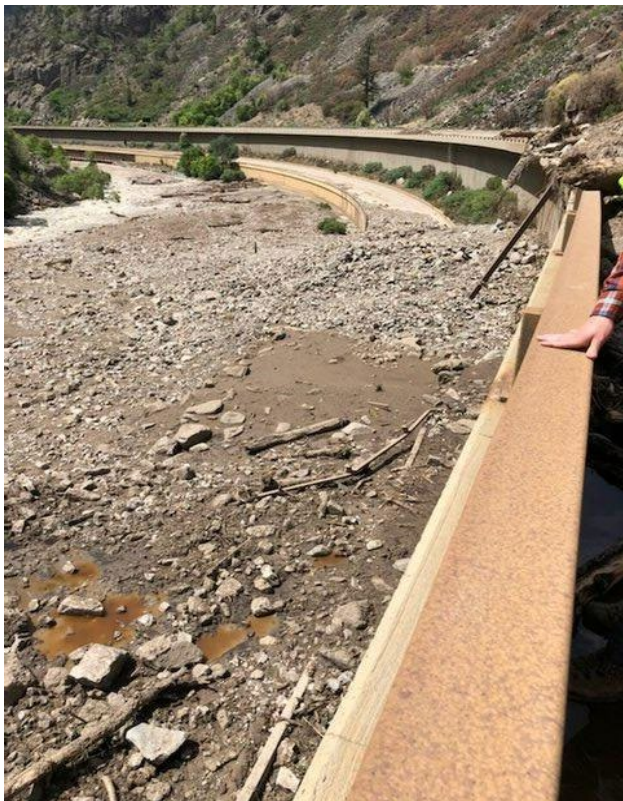

# Images of the Canyon

# Mudflow on the Surfaces

Large swaths of highway have been buried in over 6 feet of mud and debris.

# Impact of the Monsoon

Glenwood Canyon typically receives an average 2.4 inches of rain in July.

Over the course of five days more than 4 inches of precipitation fell on the burn scar area.
